Wall Mounting Bracket HPP272WALLMOUNT

The optional wall mounting bracket HPP272WALLMOUNT (material: AISI316L stainless steel) allows mounting either Vaisala HPP270 series H₂O₂ probe, HPP271 or HPP272, onto a wall inside the monitored process. The following figure shows an example installation for HPP272.

Let the signal cable hang loosely so that it makes a bend. This prevents condensing water from running to the probe along the cable. Do not hang the probe by the signal cable.

Make sure the signal cable you use is suitable for your biodecontamination process.
