Vaisala Data Logger QML201C incorporates proven sensor technology by Vaisala. A 32-bit central processing unit (CPU), 24-bit A/D conversion (ADC), autocalibration of the ADC, and measurement electronics coupled with advanced data quality control and validation software ensure the accuracy of data measurement.

Easy to Use
Sensor measurements, statistical calculations, data logging, and data transmissions are performed according to the configuration done with the Vaisala Lizard Setup Software. The software has many setup options and advanced features.

Easy to Upgrade
The system architecture enables QML201C to be easily upgraded with new sensors, calculations, output formats, and logging schedules at any time to accommodate the changing requirements of the users.

Easy to Expand
QML201C can also be expanded with another QML201C unit that offers 10 additional differential analog channels and serial lines.

Easy to Install, economical to maintain and upgrade
Field-proven reliability and accuracy in harsh environments
Low power consumption
Extensive calculation and data logging capability
Good expandability and high level of customization through open and modular design
Built-in TCP/IP connectivity
Compact design

A digital I/O unit adds 8 digital outputs and 8 digital inputs for sensors, power optimizing, and unmanned control functions based on user-defined requirements.

The basic system provides RS-232, RS-485, and SDI-12 ports for interfacing with almost any type of telemetry, terminal, displays, and smart sensors. With optional plug-in modules, the number of serial ports can be extended from 2 to up to 8 ports, enabling multiple RS-232, RS-485, SDI-12, and Ethernet connections.
