

5 ways modern lidar is superior to met masts

VAISALA

1

Only lidar can measure up to today's modern turbine heights

2

Superior, reliable power curve measurements - from multiple inputs and heights

3

Met mast measurement introduces bias - doesn't have the height capabilities or multiple inputs needed

4

Accurate, reliable lidar data improves bankability to secure project funding

5

Lidar can be moved and repurposed for **multiple projects**, improving ROI and safety
